

**CONVERTIBLE FLUID FEED SYSTEM WITH
COMFORMABLE RESERVOIR AND METHODS**

ABSTRACT OF THE DISCLOSURE

A feed system for an aerosolizer utilizes an ampoule containing a liquid and includes a housing having an ampoule region into which the ampoule is held, and a liquid receiving region that is adapted to receive liquid dispensed from the ampoule. An interface is used to couple the liquid receiving region to an aerosol generator, whereby liquid from the liquid
5 receiving region is permitted to flow to the aerosol generator for aerosolization.
